To: Georgy Vasilyev, General manager

Subject : Recognition letter

Dear Sir!

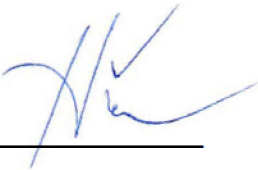

In July 2020 – February 2021 Expro has been monitoring wells with complex completion using quartz downhole pressure and temperature gauges zPas-20M from ZetScan (Russia, Kazan). zPas-20M gauges, located in containers, were constantly recording pressure and temperature during more than 220 days. All 10 gauges used in the project have shown high reliability and matched the specification sheet at:

- High resolution
- High endurance
- Low noise level

The gauges are simple in service, programming and data reading interface is easy and intuitive. Expro recommends using quartz downhole pressure and temperature gauges zPas-20M for pressure and temperature monitoring and well testing.

On behalf of Expro, I would like to thank you for your promptness in supplying the gauges and for your support during commissioning. We look forward for further cooperation.

Best regards,
